

1    **Abstract of Disclosure**

2    A guide is provided for guiding a first drill and a second drill while  
3    boring a door with holes for receiving a lock. The guide includes a first  
4    element, a second element, a third element, a first threaded bolt and a  
5    second threaded bolt. The first element guides the first drill and abuts a  
6    first face of the door. The second element guides the first drill and abuts  
7    a second face of the door. The third element abuts a side of the door.  
8    The first threaded bolt is connected between the first element and the  
9    third element so that the first element is movable on the first face of the  
10   door. The first threaded bolt is operable for driving the first element  
11   against the first face of the door. The second threaded bolt is connected  
12   between the second element and the third element so that the second  
13   element is movable on the second face of the door. The second threaded  
14   bolt is operable for driving the second element against the second face of  
15   the door.
